

Critique: Fireplace

Qui Nguyen, Casey O'Brien, Katie Siegel, Annie Tang

Overview

POSITIVES

- Excellent job being very clear with your overview.
- Purpose of your app and differentiation from other to-do lists is easy to understand
- Context diagram looks good and makes sense

SUGGESTIONS

- Metadata is a little vague and defining what metadata is needed in your overview would make it more clear

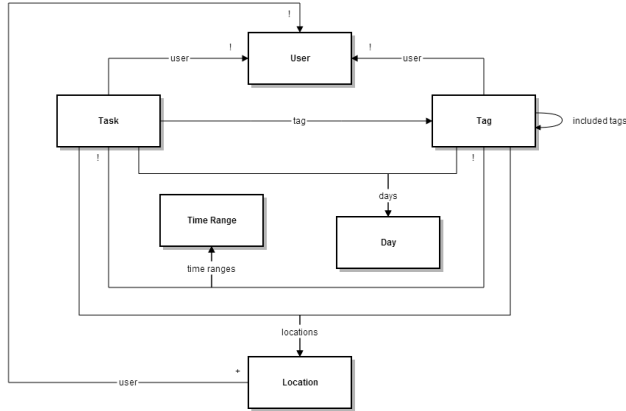

Data Model

POSITIVES

- Good job naming relationships
- Looks very professional

SUGGESTIONS

- Have time range, day, and location be subclasses of Metadata
- Try to reorganize
 - Don't use 3-way arrows, just split them
- There shouldn't be a relationship between Users and Locations
 - Doesn't need to be stored in the database
- Some arrows seem to be backwards
 - i.e. Task to User

Concepts

POSITIVES

- Concise and complete

SUGGESTIONS

- Some concepts are confusing, adding an example for some would make things more clear (i. e. what is exactly is a “tag”)

Behavior

POSITIVES

- Concise and complete
- Threat model and mitigations look good

SUGGESTIONS

- Perhaps consider adding a few more innovative features
- Security: doesn't seem necessary to save current location in database
 - Make location for tasks optional
 - Then users don't need to have any location info stored

User Interface

POSITIVES

- Screenshots look good

SUGGESTIONS

- Condense all images into either one folder or one page so that it is easier to view

Design Challenges

POSITIVES

- Well organized
- Nice evaluation of possibilities and coming up with a proposed solution
- Good job keeping all design challenges away from being too implementation-specific

SUGGESTIONS

- Discuss variations of “See All Tasks” and their pros and cons
