

Mentor Meeting #2 - Agenda

Questions

- Do you have any comments on our data model?
- Do you have any comments/suggestions for our UI (based on wireframes)?
- How to combine tags (two possibilities):
 - Recursive ANDing and ORing
 - For each tag, determine the tag's truth value by ANDing the truth values of its tags
 - For a tag that has only attributes, AND it's attributes
 - How to combine tags and attributes for a tag that has both? +Overriding location/time/day information of inner-tags appropriately based on which attributes are selected +No override, just ANDing +Overall ANDing and ORing +For a particular tag, OR all of the locations encompassed in that tag, OR all of the times, and OR all of the days, and then AND those 3 values together
- When creating a task, if you select attributes and tags, should attributes override tags?
- When creating a task or tag, should we show the user all the raw location/day/time information compiled from all the tags and attributes chosen?
- How are we going to incorporate the concept of due dates?
